MEMORANDUM FOR Command Core Users

21 May 2001

FROM: AFIERA/RSEC/RSHI

SUBJECT: Command Core System (CCS) User's Manual – Version 4.3

1. AFIERA's Industrial Hygiene Branch and Command Core Program Office are proud to provide you with the Version 4.3 Users' Manual for Command Core. This reference manual was developed by a Bioenvironmental Engineering (BEE) technician for BEE technicians!
2. The manual index has been hyperlinked so that you can quickly navigate to topics of interest and use the reference material. To ensure that the manual was detailed and comprehensive, the guide demonstrates how to enter data and navigate within the system using both the drop down menus and graphical user interface buttons.
3. For those of you that like to skip to the back and read the end of the book first, we have indeed saved the best for last! The new management view navigation method is provided as a reference on page 70. The management view section also includes an index with hyperlinks that will take you directly to the appropriate topic within the reference manual.
4. We believe that this is the most detailed and comprehensive user's manual ever developed for Command Core, and we are confident that it will be invaluable to you...the CCS users! Special thanks to TSgt Jason Kent from the AFIERA Industrial Hygiene Branch for his superior support in creating this superb document!
5. If you have questions or suggestions for improving this manual please feel free to contact Maj (S) Agapito Lambert or SSgt Aaron Tedrow at DSN 240-4863 or 240-4938 respectively.

Craig B. Dezell

CRAIG, B. DEZELL, Maj, USAF, BSC
Chief, Command Core Program Office
